

Canis Major™

FIXED EXAM LIFT TABLE

Canis Major™ fixed exam lift tables are designed to change the way you interact with your patients and clients. The Canis Major is **freestanding** and requires **no bolting** to floor or wall. The Canis Major is shipped fully assembled and ready for immediate operation.

The new “perpendicular to the wall” design allows you access to both long sides of the table. In addition to this ease of use point, Canis Major enables you to not only examine your patient at eye level but also communicate eye to eye with your client. Canis Major provides better control because your patient is precisely where you want them to be. The removable cushioned exam surface offers a warm secure footing for your patient.

Exclusive features make the Canis Major ideal for all types of patients.

Canis Major also gives your clients an enhanced perception of the value of the services provided because they see their pet is having a positive, low stress experience.

Optional scale allows you to examine and weigh patients in one step. Scale features include:

- Automated weight averaging
- Pound or kilogram reading at any time
- Factory calibrated to 50 gram accuracy
- Readout is conveniently located at eye level

Specifications:

The Canis Major is manufactured to exacting standards of fit and finish.

The tabletop, vertical stack and base plate are constructed of stainless steel.

The back modesty cover fully encases all moving parts and, along with the tubular table edge, is powder coated for both chip and scratch resistance.

300 lb Maximum Lift

Optional Built In Scale ± 0.1 lb

Powered by medical-grade electric actuator for maintenance-free quiet, smooth lift

Lowers completely to floor and rises from 0" to 44"

Both foot and hand operated motion controls

Safety system prevents accidents during table travel

110 AC @ 10 AMP power

Overall dimensions:

55-1/4"L x 25-1/4"W x 60"H

Table lowers to floor allowing patients to easily step to tabletop. Floor to tabletop height is 4".

Tabletop moves independently of frame. Scale display remains at convenient fixed height.

Safety sensors located in the tabletop provide peace of mind operation. Sensors disable only the down switches if they encounter objects beneath the table, namely feet, children or other pets.
